

Seth Toland

Full Stack & Mobile Developer

Plano, TX | (972) 743-5355 | tolandseth@gmail.com | sethtoland.com | linkedin.com/in/seth-toland | github.com/SAToland

SUMMARY

Full stack and mobile developer who designed, built, and maintains BearTrax, an offline-first Flutter and Firebase app that an oilfield services company uses every day for safety reporting and payroll. Works across the stack: mobile UI, serverless TypeScript backend, security rules, and CI/CD, from requirements through production support.

EXPERIENCE

Freelance Mobile Developer, Bear Oilfield Services LLC

March 2026 – Present

BearTrax, a field workforce management app (Flutter, Dart, Riverpod, Firebase, TypeScript)

sethtoland.com/beartrax

- Sole developer of a production Android and iOS app (37.5k lines of Dart, 13 feature modules) that replaced the crew's paper safety and billing forms and is used daily in the field.
- Built it offline-first on Firestore's local cache with device-generated IDs, so forms save instantly at well sites with no signal. Moved gapless billing numbers to transactional Cloud Function triggers so numbering stays correct even after a device is offline for days.
- Wrote 15 TypeScript Cloud Functions for user provisioning, sequential numbering, scheduled job sweeps, and push notification fan-out.
- Generated print-ready PDFs of the company's 5 existing paper form types on the device, so clients and regulators accepted the output unchanged. Built a work-hours report that exports weekly payroll to Excel (.xlsx).
- Enforced employee, supervisor, and admin roles through signed Firebase Auth custom claims and field-level Firestore security rules, and kept all privilege changes on the server.
- Found and fixed two release-only production bugs without a Mac: Android Auto Backup restoring stale login data (logging users out on every relaunch), and missing native APNs registration that silently blocked all iOS push notifications.
- Set up CI/CD with GitHub Actions and Codemagic auto-submission to TestFlight. Covered payroll rounding, week boundaries, and PDF pagination with 16 test suites. Shipped full English/Spanish localization (887 strings).

Server, Blue Goose Cantina

June 2025 – March 2026

- Handled multiple tables at once through peak dinner rushes at a busy Tex-Mex restaurant, working with kitchen and bar staff to keep orders accurate and on time.

PROJECTS

Tournament Generator | React, Node.js, Express, MongoDB

github.com/SAToland/tournament-generator

- Built a tournament bracket app with custom React components that generate and render matchups dynamically as results come in.
- Designed a RESTful Express API backed by MongoDB to save tournaments and results.

eLibrary | React, Node.js, Express, MongoDB (team project)

5-day sprint

- Led the front end's integration with an external book-data API, and built book search, reviews, and user authentication with personalized dashboards.

SKILLS

Languages	Dart, TypeScript, JavaScript (ES6+), Java, Python, SQL, HTML/CSS
Mobile	Flutter, Riverpod, go_router, iOS/Android native setup, ML Kit, VisionKit
Backend & Cloud	Firebase (Firestore, Auth, Cloud Functions, Storage, FCM, App Check, Crashlytics), Node.js, Express, Spring Boot, Flask, REST APIs
Frontend	React, React Router, Bootstrap, Vite
Databases	Firestore, MongoDB/Mongoose, MySQL
Tools	Git, GitHub Actions, Codemagic, TestFlight, Postman

EDUCATION

Coding Dojo: Full-Stack Software Development Certificate

January 2025

An intensive online program covering front-end and back-end development in the MERN, Python, and Java stacks.
